Supply Chain Monitoring Software

Product Details

This scope of work is for design & development of an application for tracking and tracing the path of batches of shipment from the headquarters/State Level to the various districts and across the complete value chain up until the school level. The below mentioned points summarize the requirement: -

1. Each batch shipment will be assigned a unique QR Code/Bar Code
2. Each batch will have certain fields assigned to it like date of dispatch, source/origin point, destination point, transit route with all interim locations tagged onto the same.
3. Provision shall be made for all transit points (like district, block, school etc.) to update the information contained in the database (like “received”, “dispatched”, “cancelled”,

“delayed” etc.) by scanning the QR Code/Bar Code on the batch shipment. This updation shall be made upon receipt and dispatch of shipment respectively with an option to enter remarks (to input certain important information pertaining to the state of receipt, dispatch, delay etc.)

4. Provision shall be made to track the shipment by all concerned stakeholders like “Dept. HQRS”, “District Level Officer”, “Block Level Officer” and “School” to track the journey of the batch shipment through their respective logins in the mobile application. A graphical seek-bar on the UI can be provided pictorially depicting (representational) the complete route highlighting the areas covered/remaining towards the final destination.
5. Provision will be made for the administrator to manually update the status of the shipment in case any stakeholder in the value chain is unable to update the information due to technical glitches.
6. Provision for the administrator to define the different masters like “Shipment Status”, “Shipment Size/Category”, “locations” (for entering “Place of Origin” & “Place of Delivery”), mechanism for defining the transit route, estimated time of delivery etc.
7. Provision for the administrator to define roles in the system with access rights & privileges and assigning them to different users.
8. Provision for the administrator to define the various users or optionally, users can download the application from the Android play-store and register themselves using some authentication mechanism.
9. Provision for the administrator to view/download/print certain pre-defined reports like no. of shipments delivered in a particular time-period, no. of shipments pending to be delivered, no. of shipments which have overrun their estimated time of delivery etc.
10. Provision for sending different application-based alerts and notifications to all stakeholders upon triggering of key events like “package received”, “package dispatched” etc.
